Heat Stress TUB

Cattle

Allied Hot Flash Tub

Provide free-choice as a supplement to pasture cattle at the rate of one block for each 15 to 25 head. Place blocks in pasture near areas frequented by livestock, such as watering locations, shade or loafing areas. Cattle normally consume approximately 1/2 pound per head daily. Consumption may vary depending on climate, grazing conditions, condition of livestock and/or availability of other feeds. In situations where climate and/or other factors result in less than 1/2 pound per head daily, intake of supplement can be increased by increasing the number of blocks per pasture.
